<https://www.linkedin.com/in/felipedelosh/>

I am a Systems and Computer Engineering graduate from the University of Caldas, with more than 4 years of experience developing software solutions in C#, Java, Python, and Kotlin for industries such as logistics, healthcare, sports, general services, and tourism, in addition to university teaching experience.

I consider myself a dynamic and creative person, passionate about backend development, frontend technologies, data analysis, and teamwork within agile methodologies. My goal is to continue growing professionally in the technology field while contributing innovative solutions to workplace challenges.

Expertise:

NETACTICA (Mayo 2025 - Present)

position: Backend Developer (Freelance).

<https://www.netactica.com/>

RAPPI

<https://www.rappi.com.co/>

Goals:

- Recovered 150k failed mileage accumulation orders for LIFEMILES (RAPPI LOYALTY) through a Python “war-mode” script under extreme pressure, preventing the team’s dismissal and receiving recognition from Jenny Barón (Rappi Loyalty Colombia leader).
- Generated technical documentation (UML diagrams and sequence diagrams) through reverse engineering.
- Created and deployed new RESTful API endpoints (RxKotlin).
- Implemented login functionality using OIDC technology ([Node.js](https://nodejs.org/)).
- Set up and integrated a new MongoDB database for information backups (LOYALTY).
- Designed and implemented entities, repositories, and reactive services (RxKotlin).
- Integrated AVIOS - IBERIA CLUB (RxKotlin).
- Integrated DOTERS - VIVA AEROBUS (RxKotlin).
- Integrated MILHAS - LATAM PASS (RxKotlin).
- Asynchronous Accumulation Reconciliation Engine
- Conducted security reviews and testing using JWT and JWE.
- Developed unit tests for asynchronous services (RxKotlin).
- Dockerized dependencies for testing and development environments.

Keywords:

API, Server, Backend, Docker, UML, RxKotlin, Kotlin, Python, Node.js, JSON, MongoDB, PostgreSQL, JWT, JUnit, Mockito.

AGUAS DE MANIZALES (October 2025 - April 2026)

<https://www.aguasdemanizales.com.co/>

Golas:

- Designed Microservices Architecture.
- Established development standards for consistent endpoint implementation.
- Documented and exposed APIs using Swagger and C# Minimal APIs.
- Reduced API response times by optimizing data structures.
- Developed Dockerized authentication microservices (ASP.NET) following Clean Architecture principles.
- Managed file handling through cURL integrations with MinIO.
- Managed SQL Server and Oracle databases using Entity Framework.
- Implemented Microsoft Entra ID integration for authentication support.
- Migrated microservices using Docker.
- Orchestrated services with Docker Compose, ensuring modularity and scalability.
- Designed and implemented testing solutions using xUnit and Mockito.
- Designed and implemented use cases.

Keywords:

API, Server, Backend, .NET, ASP.NET, Docker, Docker Compose, SQL Server, Entity Framework, Microsoft Entra ID, MinIO, xUnit, Mockito.

Cycle (January 2025 - May 2025)

position: Full Stack Developer (Freelance).

<https://www.cycle.net.co/>

Goals:

- Creation of complete CRUD in Angular (.html, .SCSS, .ts).
- Implementation of reusable components with Observer (RXJS).
- View data in the (Primeng) table with automatic update of data rows with (Angular RXJS).
- State management and communication of Angular components.
- REST API with HttpClient (Angular).
- Design & Develop APIs REST in (asp.NET) with mediator pattern.
- Dependency injection (asp.NET)
- Implementations with repository, services, Ports and adapters (asp.NET with SOLID).
- Use of Entity Framework Core (ORM).
- Implementation of new entities (SQLserver, asp.NET, Angular).
- Creating new tables, procedures and views (SQLserver)

Keywords:

Angular, Typescript, asp.NET, MSEntityFramework, RXJS, SQLserver, Primeng, Hexagonal Architecture, Azure DevOps.

FACIRES (March 2024 - December 2024)

position: Backend Developer, Frontend Flutter Developer (Freelance).

<https://scifamek.com/>

Goals:

- Implementation of a middleware system (Java Spring Boot interceptors).
- Protection of API with interceptors (Auth JWT).
- Endpoint (Java Spring Boot) to generate work certificate in PDF (Base64) from .docx

- Implementation (Java Spring Boot) of QA system JUnit.
- Automatic code generator (GCA).
- CronJOBS Python for Backup of DB from firebase.
- Architecture DDD.
- Create new Widgets to APP.

Keywords:

Server, DDD, API, SQL, FIREBASE, Base64, Backend, Java, Spring Boot, CronJOBS, GCA, JWT, Junit, Flutter, Dart.

Depoty (January 2024 - June 2024)

Position: FullStack Developer (Freelance).

<https://scifamek.com/>

Logros obtenidos:

- Implementation (Node js) of QA system Jest.
- LOG system (Node js).
- Develop use cases from backend to frontend (Node js - Angular).
- Angular material.
- Data model in firebase.

Keywords:

Server, JavaScript, TypeScript, RXJS, Angular, Angular Material, NodeJs, Microservices, CI, FIREBASE

Universidad de Caldas (February 2024 - October 2024)

Position: Introduction programming teacher, POO teacher, Database teacher, Software architecture teacher, QA teacher.

<https://www.ucaldas.edu.co/>

Logros obtenidos:

- Teaching computational thinking to new generations.
- Teaching software architecture and design patterns to new generations.
- Teaching how to plain software projects to new generations.
- Teaching how to test a software code and project to new generations.
- Algorithms.
- SQL/PLSQL.
- MongoDB.
- Java & Python.
- JUnit.

Keywords:

Teach Basic programming, Java, JUnit, Python.

Hospital departamental San Rafael de Risaralda Caldas (April 2023 - July 2023)

Position: Head of IT.

<http://www.esehospitalsanrafael.gov.co/>

Goals:

- Automatic reports of patients (Hospital KPI) (SQL, CNT, Python).
- Server Guard (Windows Server).
- Database Backups (SQL).
- Correction of budgetary movements (SQL).
- Correction of medical records and laboratory results (SQL).

Keywords:

Python, SQL, Postgresql.

Testeando SAS Manizales (August 2021 - December 2022)

Position: FullStack Developer.

<https://www.netactica.com/>

<https://turismo.co/>

Goals:

- Trigger system to warnings (Admin, Clients, y providers) (Ruby)
- Creation of landing pages and views for new clients (Ruby, .erb)
- Automatic report of sales KPI (sales, reservations, sales intentions.) (SQL, Python, BI)
- Configuration of docker-compose for node updates.
- Deploy (Ruby - capistrano)
- Server guard (Linux)
- Solution of BUGs (API, FRONTEND, BACKEND) (Ruby)
- Implementation of recaptcha (Ruby, Recaptcha)
- Code review to lighten the server load CPU+RAM (Ruby cron jobs)
- Integration of nother API (MAPPING PRODUCTS) (Python, .csv)

Keywords:

Ruby on rails, API, BI, HTML, linux, Docker, python, SQL, GITHUB, deploy

Rebold Manizales (August 2018 - August 2021)

Position: Unlayout.

<https://letsrebold.com/es/>

Goals:

- Knowledge of layout/grid system for newspapers, websites and advertising.
- Knowledge of display ad sizes.

Keywords:

Grid, layout

Skills:

- DotNet (asp.NET, C#, MSEntityFrameworkCore).
- Kotlin (RxKOTLIN).
- Python (Flask, Django, Pandas).
- Ruby (Ruby On Rails).
- JavaScript (NodeJs, Angular, TypeScript, RXJS).
- Java (Spring boot).
- PHP.
- API.
- MVC, DDD, Microservices.
- HTML5 (HTML, CSS, Js, JQuery, AOS, Bootstrap).
- Docker.
- SQL (PLSQL, MySQL, Postgresql, SQLserver, SQLite).
- NOSQL (MongoDB, Firebase).
- GIT & GITHUB, AWS.
- SCRUM.
- LINUX.
- Claude Code, ChatGPT, DEEPSEEK, Copilot.

- Testing (JUnit, Jest, Mockito).

Education:

Universidad de Caldas (2014 - 2022)
System and computing engineer
Manizales, Caldas, Colombia.

Professional license COPNIA:

051210-0704922 CLD
R2024005165
